EXPERIENCE

Software Engineer
Google
New York, NY
August 2018 - Present

Designed and wrote delightful features on Search with the goal of improving brand perception. Regularly participate in product planning around sensitive topics and user experiences. Search has over one billion active monthly users across the world.

Improved logging and metrics reporting for Magi, an AI powered Google search feature. Participated in an experimental sprint to prototype the future direction of Magi.

Software Engineer
Phone2Action
Arlington, VA
August 2016 - July 2018

Participated in product-driven bi-weekly sprints developing features for grassroots advocacy software written in Laravel and Vue.js. Also troubleshoot client issues in a quick and detailed manner and managed a team of 4 engineers. Client base doubled during tenure.

Software Engineer
Global Thinking
Alexandria, VA
January 2015 - August 2016

Implemented new features and debugged issues on a web application written in Magento. Worked as part of a Sprint team that worked closely with product managers. Created UI mocks for developers to work off of for new feature requests.

Web Application Developer
Rochester Institute of Technology
Rochester, NY
August 2014 - December 2014

Planned and developed a new student management web application for the School of Interactive Games and Media. Gathered and negotiated client requirements to propose a UI and implement the software for the web app. Written in Laravel 4 and MySQL.

Technical Assistant
Rochester Institute of Technology
Rochester, NY
December 2012 - May 2014

Maintained and upgraded office hardware, as well as provided technical support for staff at the Office of Alumni Relations. Led development of the office intranet, which was written in PHP and MySQL. Answered phones, greeted guests, and maintained positive relations with alumni.
